- 4 velocity layers per key
- Recorded sample quality: 24 bit / 44.1 kHz
- Reverb, delay, stereo control to fit the flugelhorn in every mix
- Best Balance of Natural Velocity Resolution and Data Size
- Library Size: 186 MB

### Installation Notes

1. Uncompress BestSound\_Flugelhorn\_.zip using your favorite archiving utility.
2. Upload BestSound\_Flugelhorn\_.nki instrument into Kontakt from BestSound\_Flugelhorn\_ folder – drag and drop, or double-click from Kontakt browser. Activation is not necessary.

**Reverb ON/OFF Delay ON/OFF and Stereo ON/OFF**  
switch on/off the corresponding effects.

### **Rev Level**

change the level of the Reverb effect.

### **Rev Size**

Adjusts the size of the simulated room. This affects the duration of the reverb trail.

### **Del Level**

change the level of the Delay effect.

### **Del Time**

change the delay time.

### **Stereo spread**

Collapses (counter-clockwise) or expands (clockwise) your signal's stereo base.

### **Mod Wheel ON/OFF**

If your MIDI keyboard doesn't have Mod wheel, click the "Mod Wheel" button to turn it off.
